Application/Control Number: 10/529,177

Art Unit: 3636

Claims 1-15 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

In claim 1, the phrase "differential rigidity portions", is unclear and does not accurately set forth the invention in terms of structure and location. The same wording is utilized throughout the claims. Also in claim 1, the projections have not been sufficiently set forth in terms of their location, structure and connection to the seat, nor is it clear how the projections define the "differential rigidity portions".

Claim 8 does not structurally limit the claims in that it appears to be reciting a function of the projections. Note that claim 9 is more definite in reciting limiting language.

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

Claims 1 and 8-15 are rejected under 35 U.S.C. 102(e) as being anticipated by Losio et al.

Figures 1,2,7 show structure as claimed, including a frame having portions of different rigidity. One portion comprising projections 2' located in a recess formed

Application/Control Number: 10/529,177

Art Unit: 3636

along an outer periphery of the frame. The projections extend parallel to one another and are separated by varying distances, and exhibit a flexural and sheer strength. Note that the rear edge includes an aperture having a mesh therein, which would comprise a portion of different rigidity.

Claims 1 and 8-15 are further rejected under 35 U.S.C. 102(b) as being anticipated by Yu (US 6,739,656).

Figures 3-6 show structure as claimed, including a bicycle seat having portions of different rigidity comprising "projections" 26,27 therein, which extend within a recess formed along an outer peripheral edge of the frame. Part of the portion of different rigidity lies adjacent the rear edge of the seat, and a cover material overlies the whole seat.

Claims 2-7 would be allowable if rewritten to overcome the rejection(s) under 35 U.S.C. 112, 2nd paragraph, set forth in this Office action and to include all of the limitations of the base claim and any intervening claims.

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

Van Meter, Seaman, Jacobs, Yates et al, Hanson, Hughes, Yu ('396) and Yates show various features of the invention.
